

## MK 124 Smoke & Illumination Signal

### MK 124 Smoke & Illumination Signal

This signal consists of an aluminum case with protective caps on each end. The case has two raised beads around the circumference for positive flare identification during night use. The case contains four sub assemblies: smoke candle, smoke igniter, flare candle, and flare igniter. the igniter consists of an arming lever that must be extended before functioning and mechanism that cocks and then releases the firing pin.
